

## Maintenance & washing of cleaning textiles

# Laundry sorting

Do not wash cotton products, such as bath or beach towels in the same load with microfiber products

Microfiber cloths and interior mops can be washed with each other, but separated from Floor, Safety and Polishing mops. Where possible, they should also be sorted according to color.

The MicroMulti floorcloth should always be washed separately, or together with Floor mops (separated in a washing net).

After use all the “hard” utensils should be wiped clean with a damp cloth.

Floor mops can be washed with each other, but separated from microfiber cloths, interior mops, Safety and Polishing mops. Squeegees can be washed together with floor mops.

Scrubbing Safety products and Polishing mops should be washed separately, or separated from other Floor mops with a washing net.

Soft tumble drying (lower temperature).

Max. temperature 95°C, recommendation 60°C.  
Finnmop, Extramop, Specialmop and Polishing mop max. 70°C.

No chlorine bleaching.

No chemical washing.

PROFESSIONAL

## Washing the cleaning textiles

1. Microfiber products and other products are to be washed separately.
2. Floor products (mops) and interior products (interior mops & cloths) are to be kept separate from each other during the entire service/maintenance chain.
3. Cleaning textiles should be washed in a temperature of 60-75°C
4. Scrubbing Safety products should be washed separately or separated from other material with a washing bag.

1. Never fill more than 2/3 of the the washing drum  
- if floor mops are especially dirty only fill 1/2 of the drum.
2. In a correctly filled washing machine (in 100% use), the laundry has enough space to easily spin during the wash. The laundry should be able to turn and drop down at the point of 11 o'clock.

## Maintaining and servicing cleaning textiles is important

*“Working with clean and functioning tools improves the cleaning performance, creates a positive image and makes the job more enjoyable”*

1. Handle dirty and clean textiles separate from each other.
2. Observe and follow the washing instructions on cleaning textiles.
3. Follow the sorting instructions of cleaning textiles - microfiber cloths, microfiber mops, wall & interior mops and scrubbing mops shall be washed separately. Natural fiber materials must also be washed separately, and it is preferable to wash different colors separately
4. Pre-rinse the dirty cleaning textiles of excess dirt.
5. Choose the level to which the washing machine is filled, according to the level of dirt on the mops. If the cleaning textiles are very dirty the level to which the washing machine is filled should be lower.
6. Choose the washing program according to type of laundry material, level of dirt and required level of hygiene at the site.
7. Only handle clean laundry with clean hands.
8. Dry the clean textiles in a tumble dryer or in an airy space. If you use a tumble dryer: Pay attention to the washing/service instructions of the textiles, and choose the program accordingly.
9. Store dry and clean textiles in the space reserved for them.
10. Remember to regularly maintain and clean the washing machine, the tumble dryer and the cleaning center.
